

**MAI INVESTS IN NEW EQUIPMENT TO ASSIST IN MAKING THE SPORT
SAFER**

This is to bring to your attention that the MAI has obtained a new ultrasonic instrument that can measure the wall thickness of a roll cage in a few seconds without having to make any cuts or insertions to the roll cage.

From now on, measurements will be taken of all roll cages of vehicles running in any MAI Championship event. If the roll cage does not conform to the regulations, the Stewards will decide if the vehicle will be permitted to participate or not.

It would be in your own interest to ensure that the roll cage specifications are in conformity with the regulations, to prevent any possibility of the car not being permitted to start.
